

BY2H | Raw-observation heading: error and native support

Constrained LAMBDA: 1059/1350, 89.13° Constrained WLS: 1029/1350, 89.19° Recursive ambiguity filter: 467/1350, 63.99°

All saved valid errors; lines break across invalid epochs and angle-wrap jumps.

V2 guardless execution snapshots; no post-result guard rerun. Reference is fused Euler yaw, not independent truth.

Projected lateral-baseline heading is not full body attitude. Different input/algorithm branches prevent a same-input solver ranking.
