

BY20 | Raw-observation heading: error and native support

Constrained LAMBDA: 1173/1885, 81.27° Constrained WLS: 1210/1885, 81.49° Recursive ambiguity filter: 269/1885, 103.75°

All saved valid errors; lines break across invalid epochs and angle-wrap jumps.

V2 guardless execution snapshots; no post-result guard rerun. Reference is fused Euler yaw, not independent truth.

Projected lateral-baseline heading is not full body attitude. Different input/algorithm branches prevent a same-input solver ranking.
