

BY2 | Raw-observation heading: error and native support

Constrained LAMBDA: 980/1370, 85.02° Constrained WLS: 961/1370, 85.18° Recursive ambiguity filter: 541/1370, 79.93°

All saved valid errors; lines break across invalid epochs and angle-wrap jumps.

V2 guardless execution snapshots; no post-result guard rerun. Reference is fused Euler yaw, not independent truth.

Projected lateral-baseline heading is not full body attitude. Different input/algorithm branches prevent a same-input solver ranking.
