

BY2H | Joint velocity and heading-handling contrast

— F02: fixed yaw; RV off | saved RMSE 0.072 m — F03: gated yaw; RV on | saved RMSE 0.069 m

RV and yaw weighting/gating both change; these curves do not isolate the RV effect.

Original F02/F03 cohort, common dual-heading initialization; matched/output 58580/58580. Joint changes are not uniformly beneficial.
