

BY20 | FGO position errors at the same GNSS1 point

— OISAM (RTK + IMU): 370/378 — Wen TC (code + AHRS/IMU): 377/378 — GNC (code + Doppler): 377/378

Dynamic-only support: no prior-only initialization states; no lines across a gap or block reset.

3 new OISAM calls + 6 reused Wen/GNC identities. Oi uses its own attitude for point transport; all original denominators remain.

Different sensor layers and information windows: application results cannot rank same-input solvers; reference is not independent truth.
