

BY20 | Saved FGO trajectories at GNSS1

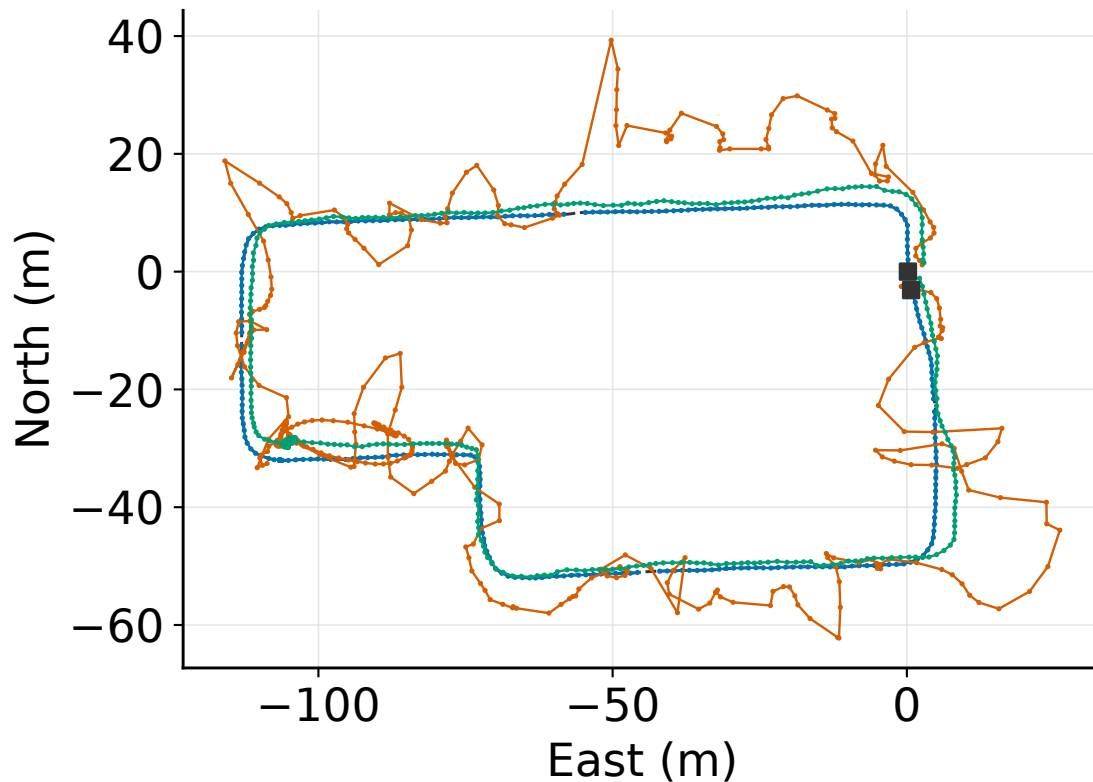

---- Saved fused reference

—●— OISAM: RTK + IMU (370/378)

— Wen TC: code + AHRs/IMU (377/378)

— GNC: code + Doppler (377/378)

All saved dynamic-valid positions; equal metre scales; no rotation, translation, scale fitting or new interpolation.

Oi uses its estimated attitude for GNSS1 transport; gaps and block resets are not connected. Fused reference is not independent truth.

Later engineering diagnostic: 3 new Oi calls, 6 reused Wen/GNC identities. These are not original V3 midpoint trajectories or same-input rankings.
